

PERSONAL PROTECTIVE EQUIPMENT POLICY

POLICY:

Management of BN Industries assumes responsibility for designing, planning and arranging work processes within the company so that safety hazards are eliminated or minimized. Where hazards cannot be completely eliminated through engineering controls and substitution of materials, management will provide the appropriate personal protection to the workers. Management will ensure that each worker is properly trained in and knowledgeable of the hazards associated with his/her work, the type of PPE required and its proper maintenance, care and use.

PROCEDURES:

According to the OSHA, Section 28 (1), the worker must use or wear the protective equipment, protective devices and clothing specified by the management of the company. The following safety guidelines should be adhered to, to maximize worker health and safety:

- 1.1 Always inspect the personal protective equipment prior to use.
- 1.2 Wear only the type of PPE your supervisor specifies as appropriate for the job. Inappropriate and improperly worn PPE can result in injury, illness and damage to equipment resulting in high costs to both you and the company.
- 1.3 Be certain your PPE fits properly, especially in the case of hearing or respiratory protection.
- 1.4 Keep personal protective equipment clean and store in designated container or location when not in use.
- 1.5 If you are uncertain as to how to wear or operate the required personal protective equipment, immediately ask your supervisor for assistance.
